Sistema: 3 LED detectores × 4 LED emisores, un solo TIA a 5 V

Programa: `medir` (se repite `rep` veces)

Tú cambias en la protoboard: LED detector (`det rojo|verde|azul`), LED emisor (`emi rojo|verde|azul|blanco`), J1 (`modo fv|fc`) y R_f (`rf N`); el programa solo los etiqueta. Otros comandos: `tabla`, `borrar`, `leer`, `led on|off`, `stream on|off`, `rep N`, `prom N`, `espera N`, `csv`.
